PROFESSIONAL SUMMARY

System Engineer with experience in IT Operations and Database Administration at a leading telecommunications company. Experienced in Linux, Windows Server, database administration, VMware, and Docker. Skilled in supporting business-critical web applications, including CRM systems, and developing monitoring and automation solutions to improve system performance and stability. Strong problem-solving skills with the ability to work under pressure, learn new technologies quickly, apply them effectively, and collaborate well with cross-functional teams.

SKILLS

- Databases: Microsoft SQL Server PL/SQL, Oracle, MariaDB, MySQL
- Programming Language : Python, JavaScript, HTML, CSS, PHP, C++, C, C#
- OS / Platform: Linux, Windows Server, macOS, VMware, Docker
- Cloud / Environment: On-Premise Data Center · IaaS · PaaS · SaaS
- Framework: Robotframework (selenium library, database library, Requests Library, JSON Library), Cypress, playwright, Postman(API Testing)
- Enterprise Applications: CRM & Customer Engagement, Case / Information Management, Social Listening & Social Media Platform, Contact Center / IVR, Queue Management, AI Voice Analytics & Call Recording
- Monitoring & Observability: Grafana, Dynatrace, Kibana, Nagios / NRPE, Netdata
- Automation & Orchestration: Rundeck, Ansible Semaphore, Shell Script,
- SCADA / Industrial Systems: Schneider EcoStruxure Power Operation (PSO), Power Monitoring Expert (PME), Workstation Building Operation (EBO), modscan32, Firebase, PLC (Control Expert), Modbus TCP/RTU
- Network: Cisco , VLAN, Routing
- Software / Tools: Jira, Confluence, Remote Tools, VS Code, Postman, robotframework, Arduino IDE, GitHub, Git, SolidWorks, AutoCAD, MS Office (Word, Excel), Canva, draw.io, notepad++
- Hardware: PC/Server, PLC, Switch, electronic device diagnostics & repair
- AI:Github (copilot), chatGPT, claude, gemini

WORK EXPERIENCE

System Operations Engineer (DBA)

Jan 2026 – Present

Advanced Info Service Public Company Limited (AIS)

- Administer and maintain Microsoft SQL Server, Oracle, MariaDB, and MySQL databases in enterprise production environments.
- Perform database administration tasks, including backup and recovery, performance tuning, index maintenance, database health checks, and capacity planning.
- Support High Availability (HA) and Disaster Recovery (DR) operations, including SQL Server Always On monitoring, failover/failback activities, and recovery validation.
- Monitor and troubleshoot SQL Server Agent Jobs, scheduled database jobs, and production database issues.
- Perform Oracle database administration, including tablespace management, index rebuilding, database health checks, and performance optimization.
- Administer Linux and Windows Server environments, including cron job scheduling, service management, log analysis, and system troubleshooting.
- Manage virtualization and container platforms using VMware and Docker.
- Support enterprise applications, including CRM, Case Management, Social listening, Contact Center/IVR, Queue Management, and AI Voice Analytics.
- Design and maintain monitoring solutions using Grafana, Dynatrace, Kibana, Nagios/NRPE, Netdata, Uptime Kuma, Rundeck, and Ansible Semaphore.
- Develop automation using Shell Script, SQL, PHP, and PowerShell to improve operational efficiency.
- Investigate production incidents, perform Root Cause Analysis (RCA), and coordinate production deployments and maintenance with development teams and vendors.

WORK EXPERIENCE

System Engineer

Rojpaiboon equipment co.,ltd

Jun 2025 –Dec 2025

System Engineer – Data Center Projects NEXT01(GSA),Data Center Terra, Etix

- Developed and maintained Electrical Control & Monitoring Systems (ECMS) using EcoStruxure Power SCADA, Power Monitoring Expert (PME), EBO, Microsoft SQL Server, Docker, VMware, and Grafana.
- Installed, configured, and commissioned Schneider EcoStruxure/Power SCADA systems and programmed PLCs (Control Expert) for electrical, HVAC, and automation systems.
- Integrated Modbus TCP/RTU communication between PLCs, power meters, and SCADA servers for real-time monitoring and control.
- Supported data center infrastructure, including substations, ACMUs, generators, fire alarm, gas detection, and leak detection systems.
- Configured industrial networks using Cisco and Huawei switches, VLANs, and routing for secure control system communications.
- Performed Factory Acceptance Testing (FAT), Site Acceptance Testing (SAT), system commissioning, troubleshooting, and technical documentation.
- Built Grafana dashboards and SQL Server reports for energy and infrastructure monitoring, including PUE, IT Load, and BTU performance metrics.

Technical Support

Internet Based Business Group Co., Ltd

Jan 2024 – May 2025

- Review and track issue tickets until they are resolved and record them in Ticket Database system completely.
- Work with customers, partners, dealers, and suppliers to build good relationships and maintain service standards.
- Support technical troubleshooting related to Web Technology such as API, HTTP, HTTPS, HTML, Data log,node-RED json, JavaScript, and database queries.
- Effectively transfer technical knowledge to internal teams and customers, including organizing technical training when new products are launched.
- Provide technical support to the development team and users of Web and Mobile Application systems related to CRM (Customer Relationship Management) and Data Analytics.
- Investigate, analyze, and resolve technical issues by using Test Cases functional and non-functional test cases (e.g. performance testing), system data, and data log analysis to determine the root cause.
- Work with the developer team to develop and improve product quality, including Testing, Training, and Configuration.
- Monitor server performance and system health through Grafana dashboards, ensuring stable and efficient operations at all times.

INTERNSHIP EXPERIENCE

Production Engineer

President Automobile Industries PLC.

Jun 2022 – Jul 2022

Oversee the production process on an automatic production line for assembling condensers and evaporators for automotive air conditioning systems. Coordinate with senior engineers to maintain machinery and develop tools and production processes to maximize efficiency.

Main Duties and Responsibilities:

- Prepare production data for the production manager and ensure operations align with the production plan.
- Monitor and control quality throughout the production process, including:Condenser assembly,Leak testingPacking process
- Inspect defective products (NG), analyze root causes, and collect data for continuous improvement.
- Prepare and maintain production documents such as Work Instructions (WI), Q-Point process documentation, Control Plans, and Standard Time records.
- Monitor the production process and identify recurring issues to prevent reoccurrence.
- Design and develop jigs/fixtures for holding condensers using SolidWorks.
- Improve layout and optimize production processes following Lean Manufacturing and Kaizen principles.
- Apply automation systems and emerging technologies to enhance productivity and reduce operational costs.
- Ensure compliance with international quality standards such as ISO 9001.

EDUCATION

Bachelor's Degree Engineering Program in Production Design and Materials Engineering

KING MONGKUT'S INSTITUTE OF TECHNOLOGY LADKRABAN (KMIL)

2019 - 2022

- Final GPA: 2.89

SOFT SKILLS

- Problem-solving,
- Adaptability and flexibility
- Self-learning
- Teamwork
- Time management
- Stress management
- Attention to Detail
- Creativity
- Analytical Thinking

LANGUAGES

- Thai : Native language
- English : Intermediate

EXPERIENCE

Mini project

Arduino Drawing Machine

- Machine and parts design.
- Assembling the machine and solving various problems.
- Learn to use the Arduino IDE program.

Project

WASTE REDUCTION IN THE CONDENSER PRODUCTION LINE PROJECT Senior Project

- Developing new design products using the program SolidWorks
- Solve problems using principles 7 QC tool , Why-Why Analysis in work

Project Develop website

Develop dynamic websites using React.js and CSS for the Front-End to have a smooth and responsive UI/UX, combined with the Back-End using Python (FastAPI) and store data in a SQL Database to enable systematic data management.

CERTIFICATE

The Delta Industrial Automation by Delta Electronics (Thailand) PCL, May 2018
